Kitchen Hood Upgrade Project

Project Overview / Scope:

Heapy Solutions provided a complete engineering led turnkey project to replace and upgrade the Mercy Anderson Hospital Main Kitchen Hood with minimum impact to the kitchen operation. The turnkey solution included design, permit, bidding, management and construction associated with the kitchen upgrade. The project included cleaning of the existing grease ductwork, installation of a fire barrier, shaft wall, grease access doors, replacement of the main kitchen hood, and grease exhaust fan. Also included in the project was the installation of a variable exhaust hood control system, a fire alarm interface, remote monitoring by the building DDC system and a restoration of the kitchen finishes.

Project Accomplishments:

Kitchen hood down-time was kept below 5 days to reduce the impact on the kitchen operation. The area of work was partitioned off to allow operation in the rest of the kitchen. All the other work was performed with minimal impact to the hospital operation. The project was completed on schedule with a high owner satisfaction and very few scope changes.
